DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 8-12, and 15-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Garg et al., United States Patent no. 6,327,677, filed April 27, 1998.

As per claim 1, Garg teaches of monitoring a number of operating parameters associated with operation of a system, see column 3, lines 58-59. He also teaches storing a number of operating parameters in a database, this is shown in the storing of the operating parameters to a storage device, see column 5, lines 66 through column 6, line 3. He finally discloses processing at least some of the parameters stored in the database to provide a number of signals indicative of a potential fault condition, see column 6, lines 6-23.

As per claim 2, Garg teaches of displaying a message to assist an operator in diagnosing the potential fault condition before the potential fault condition actually occurs, see column 15, lines 15-21, where a message including message useful for diagnosing a problem can be sent before a problem escalates until a severe fault.

As per claim 3, Garg teaches periodically determining if the signals indicative of the potential fault condition match a predetermined fault pattern, see column 6, lines 6-13.

Application/Control Number: 09/774,992

Art Unit: 2184

As per claim 4, Garg discloses alerting an operator when the signals indicative of the potential fault condition match the predetermined fault pattern, see column 6, lines 17-23.

As per claim 5, Garg discloses logging a fault event when the signals indicative of the potential fault condition match the predetermined fault pattern, see column 7, lines 12-20.

As per claims 8-12, these claims are the means for doing the methods of claims 1-5, and are rejected under the same grounds as listed above.

As per claim 15-19, these claims are a software implementation of the methods of claims 1-5 and Garg discloses performing the methods in software, see column 16, lines 64-67.

Claims 1, 6-8, 13-15, and 20-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Bliley et al., United States Patent no. 6,622,264, filed November 22,1999.

As per claim 1, Bliley teaches of monitoring a number of operating parameters associated with the operation of the system, see column 4, lines 23-27. Bliley also teaches of storing a number of operating parameters into a database, as shown in the fault log stored in the fault log data storage unit, see column 4, lines 15-22. Bliley finally teaches processing at least some of the parameters stored in the database to provide a number of signals indicative of a potential fault condition, see column 4, lines 57-61.

As per claim 6, Bliley teaches of displaying a number of actions on a screen to assist the operator in diagnosing the potential fault condition, see column 5, lines 45-51.

Application/Control Number: 09/774,992

Art Unit: 2184

As per claim 7, Bliley teaches of displaying specific instructions to provide a step-by-step approach to diagnosing the potential fault condition, see the list of instructions of column 5, lines 45-51.

As per claims 8, 13, and 14, these claims are the means for doing the methods of claims 1, 6, and 7, and are rejected under the same grounds as listed above.

As per claims 15, 20, and 21, these claims are a software implementation of the methods of claims 1, 6, and 7, and Bliley discloses performing the methods in software, see column 2, lines 62.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure is provided on form PTO-892.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua A Lohn whose telephone number is (703) 305-3188. The examiner can normally be reached on M-F 8-4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Beausoleil can be reached on (703) 305-9713. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
